

PANEL BLIND | HOW TO TAKE MEASUREMENTS

TAKING MEASUREMENTS FOR A CEILING-MOUNTED PANEL BLIND

This type of installation allows a panel blind to be ceiling-mounted. Depending on the blind to be installed, please refer to the following instructions before completing the order form.

DRAWING EXAMPLE:

Two-panel blind.

PW = Panel width

BW = Blind width

WW = Window frame width

BH = Blind height (-3.5 cm)

$$PW = BW / (n^{\circ} \text{ PANEL}) + 7 \text{ cm}$$

PRACTICAL MEASUREMENT CALCULATION EXAMPLE – PANEL BLIND (RECESS DIMENSIONS)

Let us calculate the total height of a 220 cm blind.

BH = 220 - 3.5 cm (2.5 cm is the height of the mechanism + 1 cm is the clearance from the floor) = 216.5 cm.

Let us calculate the width of a 284.5 cm blind with 5 panels. BW = 284.5 ÷ 5 PANELS + 7 cm = 64 cm (single panel).
